Official AI Club Website

An immersive, scroll-driven digital experience showcasing the club's identity, events, group discussions, team hierarchy and campus culture.

Product	Official AI Club Website
Version	1.0
Primary pages	Home · Events · GD Archive · Gallery
Audience	Students, prospective members, event participants, faculty and alumni

CORE PRINCIPLE

The homepage creates the experience; the dedicated pages provide the depth.

Prepared as an implementation-ready starting point. Official club details, team roles, event data, photographs and recruitment links must be verified before launch.

1. Product Overview

1.1 Product Vision

Build a modern, visually distinctive website that represents the AI Club's identity, people, activities and technical culture through an immersive browsing experience. The homepage will use scroll-based storytelling, real club photographs, event highlights, group discussions and the club's organizational hierarchy. Dedicated Events, GD Archive and Gallery pages will provide deeper information.

1.2 Problem Statement

College club websites can rely too heavily on static introductions, team lists and event announcements. The AI Club needs an official digital presence that communicates its culture and activities through real experiences and organized content.

- Create a strong first impression.
- Showcase real club activities and campus experiences.
- Make upcoming and past events easy to discover.
- Preserve group discussion topics, arguments and outcomes.
- Introduce the club's organizational hierarchy.
- Provide an organized, visually engaging gallery.
- Make the official joining process accessible during recruitment periods.

1.3 Product Goals

- Establish a recognizable and professional digital identity.
- Deliver an engaging homepage through purposeful scroll animations and visual storytelling.
- Make event information and registration links easy to access.
- Maintain a structured archive of group discussions and outcomes.
- Showcase club photographs in a dedicated gallery.
- Present the team hierarchy clearly.
- Show a recruitment CTA when membership applications are officially open.
- Keep the website fast, accessible, mobile-friendly and maintainable.

1.4 Target Users

User	Primary need
Prospective members	Understand the club and discover how to join
Current members	Explore events, GD summaries and club activities
Event participants	Find schedules, eligibility, venues and registration details
College community	Understand the club's work, people and achievements
Faculty and mentors	Review the club's activities and public presence
Website administrators	Maintain events, GD records, gallery content and team details

2. Website Information Architecture

The website will contain four primary public pages:

- **Home:** Main landing page and club introduction.
- **Events:** Upcoming activities and past event archive.
- **GD Archive:** Group discussion topics, arguments and outcomes.
- **Gallery:** Categorized photographs and visual records of club activities.

Supporting elements include global navigation, a contextual Join the Club CTA, official links and developer credits in the footer, responsive mobile navigation, and appropriate loading, empty and error states. Navigation should remain consistent across all four pages.

3. Page 1: Home

3.1 Purpose

The homepage is the primary storytelling experience. It should create an immediate impression, introduce the club, communicate its culture and encourage visitors to explore. Scroll animations should support storytelling rather than distract from content.

3.2 Navigation Bar

- Official AI Club logo or wordmark.
- Home, Events, GD Archive and Gallery links.
- Join the Club CTA, displayed only during the official recruitment period.
- Mobile-friendly menu on smaller screens.

The navigation may use a transparent or minimal style over the hero and transition to a more readable background as the visitor scrolls.

3.3 Hero Section

Purpose: Communicate the club's identity and create a memorable opening experience.

- Distinctive headline and short club mission or positioning statement.
- AI-inspired visual treatment and optional supporting statement.
- Primary CTA to explore club activities.
- Recruitment CTA when membership applications are open.
- Subtle headline entrance, controlled text or visual transitions, and smooth transition into the next section.

Acceptance criteria: Visitors understand the club's identity quickly; text remains readable; essential content works on mobile and desktop; animation does not delay access to information.

3.4 Club Visual Storytelling

- Photographs from workshops, seminars, hackathons and club meetings.
- Candid images of members working together and behind-the-scenes moments.
- Short captions or contextual labels where useful.
- Staggered reveals, horizontal compositions or scroll-triggered transitions.
- View All Images CTA linking to the Gallery page.

Prioritize authentic club photographs, optimize image sizes, use responsive cropping, obtain required permissions and provide descriptive alt text.

3.5 About the Club

- Club mission and vision.
- Short introduction to technical and community activities.

- Relevant areas of interest such as AI, machine learning, research and emerging technologies, where applicable.
- A concise explanation of the club's approach to learning, collaboration and innovation.

Use a concise editorial layout rather than a long block of text. Visitors should understand the club's purpose at a glance.

3.6 Events Preview

- Selected upcoming events, title and short description.
- Date, venue or online format.
- Registration status or link, when applicable.
- Selected highlights from past events.
- Event cards link to relevant details; View All Events opens the Events page.

Only relevant upcoming events should be presented as upcoming.

3.7 GD Preview

- Selected past GD topics and brief descriptions or central questions.
- Key takeaways and optional subject categories.
- GD cards link to corresponding archive entries where implemented.
- View All Discussions opens the GD Archive page.

3.8 Team Hierarchy

Display the approved organizational structure, beginning with the President and continuing through the actual leadership positions, heads, departmental heads and sub-heads as applicable. Titles must follow the club's official structure.

- Name and official role.
- Approved photograph, where available.
- Optional short description and professional or social profile link.
- Clear hierarchy that remains understandable on smaller screens.

All names and positions must be verified. No fabricated profiles or placeholder identities should appear in production.

3.9 Footer

- Official club name and logo; college affiliation where approved.
- Links to Home, Events, GD Archive and Gallery.
- Official social media links and email/contact route, if available.
- Membership information or recruitment link when relevant.
- Website developer credits and copyright information.
- Relevant privacy or accessibility information where applicable.

Developer credits should list approved names and roles without dominating the footer. All links and contact information must be verified.

4. Page 2: Events

4.1 Purpose

The Events page is the central destination for upcoming workshops, seminars, hackathons and other official club activities, alongside a record of past events.

4.2 Page Structure

A. Events Page Header

- Page title and short introduction.
- Visual identity consistent with the homepage.
- Optional featured upcoming event.

B. Upcoming Events

- Event title, category and short description.
- Date and time where applicable.
- Venue or online format.
- Eligibility requirements and registration deadline.
- Registration URL and event status.
- Event poster or relevant photograph, if available.

C. Past Events

- Event title, date and description.
- Photographs and key highlights.
- Verified results or winners, where applicable.
- Relevant resources or follow-up links.

D. Event Filtering

If the number of events justifies it, provide category filters for workshops, seminars, hackathons and other activities.

4.3 Functional Requirements

- Clearly distinguish upcoming events from past events.
- Display available dates, venues and registration information.
- Ensure registration links open the intended official destination.
- Do not present closed or completed events as accepting registrations.
- Provide an appropriate empty state when no upcoming events are available.
- Keep homepage previews consistent with the Events page.

Acceptance criteria: A visitor can identify an event's relevant details and reach its registration page without confusion.

5. Page 3: GD Archive

5.1 Purpose

The GD Archive preserves group discussion sessions as an accessible knowledge resource, capturing topics, different perspectives, takeaways and further reading without presenting every discussion as a formal consensus.

5.2 Page Structure

A. GD Page Header

- Title: GD Archive or GD Room.
- Short explanation of the club's discussion format.
- Optional featured discussion.

B. Discussion Listing

- Discussion title or central question.

- Topic category and session date.
- Short summary and key themes.
- Link to detailed discussion content, if implemented.

C. Detailed GD Entry

- **Topic and context:** The question or issue discussed.
- **Session information:** Date and other approved details.
- **Background:** Context needed to understand the topic.
- **Arguments and perspectives:** Important supporting and opposing arguments.
- **Evidence and references:** Sources used, where applicable.
- **Key takeaways:** Important insights and conclusions.
- **Discussion outcome:** Actual outcome, including disagreement or uncertainty.
- **Further reading:** Relevant papers, articles or resources.

D. Discovery and Navigation

- Category filters may be added as the archive grows.
- Visitors can navigate between the archive and individual entries.
- The homepage features selected discussions.
- View All Discussions links to the full archive.

5.3 Content Governance

- Fairly represent perspectives expressed.
- Do not present opinions as established facts.
- Do not claim consensus unless supported by the session.
- Publish participant names, photographs and quotations only with appropriate approval.

Acceptance criteria: Visitors can understand the topic, examine major perspectives and identify key takeaways without needing access to private group conversations.

6. Page 4: Gallery

6.1 Purpose

The Gallery showcases club activities through an organized, visually rich collection of photographs. Unlike the homepage's selected highlights, it provides a more comprehensive and browsable archive.

6.2 Page Structure

A. Gallery Header

- Page title and short introduction.
- Visually distinctive opening composition using approved club photographs.

B. Section-Based Image Organization

- Workshops and Seminars.
- Hackathons and Competitions.
- Group Discussions.
- Club Meetings.
- Team and Community.

- Guest Sessions and Special Events.

Adjust categories to match the club's actual activities.

C. Gallery Layout

- Responsive asymmetric image grids or masonry-style arrangements where practical.
- Differently sized image cards with consistent spacing and image treatment.
- Category headings or dividers and optional event-based groupings.

The design should be visually engaging without making images difficult to browse.

D. Image Interactions

- Clicking an image opens a larger view in a lightbox or modal.
- Closing the view returns the visitor to the same gallery position.
- Previous and next navigation may be supported.
- Captions, event names and dates appear where available.
- A View Event link may connect an image group to its related event.

E. Performance and Accessibility

- Generate appropriately sized image variants and lazy-load below-the-fold images.
- Preserve image aspect ratios and avoid unnecessary layout shifts.
- Provide alt text for meaningful images.
- Make the lightbox keyboard-accessible and usable on mobile.
- Provide an appropriate empty state for categories with no published images.

Acceptance criteria: Visitors can browse images by section, open individual images, return to the gallery and use the experience across mobile, tablet and desktop.

7. Global Design System and Experience

7.1 Visual Direction

- Charcoal or near-black backgrounds.
- Off-white text and electric-lime primary accent.
- Bold, distinctive headings and readable sans-serif body typography.
- Authentic campus photographs and original AI-inspired graphic elements where appropriate.
- Strong spacing and clear visual hierarchy.

Use the club's approved brand identity where one exists.

7.2 Scroll-Based Experience

- Staggered text entrances and image reveals.
- Subtle image scaling or parallax.
- Section transitions and carefully controlled pinned sections where useful.
- Navigation style changes as the visitor scrolls.

Animations must be purposeful. Avoid excessive motion, long pinned sequences or effects that prevent reading and navigation. Respect reduced-motion preferences and preserve usability when animation is disabled.

7.3 Cross-Page Consistency

- Consistent navigation and footer behavior.

- Reusable event cards, GD previews and gallery links.
- Consistent typography, spacing, buttons and interaction patterns.
- Clear active navigation states and meaningful page titles.
- Coherent experience when animations are disabled.

8. Functional Requirements

ID	Requirement	Acceptance criteria
FR-01	Global navigation	Each navigation item opens the correct page; mobile navigation works.
FR-02	Hero section	Club identity and mission are clearly presented.
FR-03	Scroll animations	Animations work smoothly without blocking content or navigation.
FR-04	Club storytelling	Approved photographs display correctly and link to the Gallery where applicable.
FR-05	Events preview	Selected events display accurate information and link to the Events page.
FR-06	Events archive	Upcoming and past events are clearly distinguished.
FR-07	Event registration	Available registration links open the correct destinations.
FR-08	GD preview	Selected discussion cards link to the GD Archive.
FR-09	GD archive	Each published entry contains its topic, date, summary and documented outcome.
FR-10	Team hierarchy	Verified roles and member details are displayed in the approved structure.
FR-11	Gallery	Images are organized into sections and can be opened in a larger view.
FR-12	Recruitment CTA	Join the Club appears only during the official recruitment period.
FR-13	Footer	Official social, contact, navigation and developer links work.
FR-14	Responsive layout	Core pages and interactions work on mobile, tablet and desktop.
FR-15	Content integrity	No fabricated statistics, unverified achievements or broken production links.

9. Recruitment CTA Behavior

The Join the Club CTA must be conditional rather than permanently displayed.

When recruitment is open

- Display Join the Club in the navigation bar.
- Display the recruitment CTA in the hero section.
- Link to the official membership form or application process.
- Display accurate recruitment information and deadlines when available.

When recruitment is closed

- Hide the recruitment CTA from the navigation and hero section.
- Do not direct visitors to an expired application form.
- Retain official contact information or general club information where appropriate.

For the initial version, recruitment status can be controlled through a configuration value or simple content-management mechanism. A complex administrative system is not required.

10. Non-Functional Requirements

Performance

- Optimize images and use responsive image sizes.
- Minimize unnecessary JavaScript and third-party dependencies.
- Avoid heavy animation effects unless justified.
- Lazy-load below-the-fold images.
- Keep essential content available while nonessential visuals load.

Accessibility

- Use semantic HTML and logical heading order.
- Maintain sufficient text contrast and support keyboard navigation.
- Provide meaningful alt text and respect reduced-motion preferences.
- Ensure menus, dialogs and lightboxes are accessible.

Responsive Design

- Support common mobile, tablet and desktop screen sizes.
- Prevent horizontal overflow.
- Preserve readable text and image layouts.
- Keep important buttons and links easy to use on touchscreens.

SEO

- Provide page titles and meta descriptions.
- Use meaningful URLs and heading hierarchy.
- Configure favicon and social-sharing metadata.
- Add appropriate image alt text and ensure primary pages can be discovered by search engines.

Reliability

- Test all internal and external links.
- Verify registration URLs, dates and venue information.
- Handle missing images and unavailable content gracefully.
- Test the deployed production website, not only local development.

Privacy and Content Integrity

- Publish only approved club information.
- Obtain appropriate consent for identifiable member content.
- Collect only necessary information through membership forms.
- Do not invent statistics, awards, discussion outcomes or event details.

11. Recommended Technical Architecture

The following stack is a recommendation for implementation, not a mandatory requirement.

Layer	Recommendation
Frontend	React + Vite + JavaScript
Styling	Tailwind CSS or CSS Modules
Animation	Framer Motion or lightweight CSS/JavaScript animations
Content	Structured JSON or Markdown/MDX initially
Image delivery	Optimized static assets or an appropriate image service
Hosting	Vercel or Netlify
Content management	Simple configuration/content workflow initially; CMS when needed

Suggested Component Structure

- `Navbar` and `Footer`
- `HeroSection` and `ClubStorySection`
- `EventsPreview` and `EventCard`
- `GDPreview` and `GDCard`
- `TeamHierarchy`
- `GalleryPreview`, `GalleryGrid` and `ImageLightbox`
- `RecruitmentCTA`

The exact file structure should be decided during technical planning. Reusable components should reduce duplication without making the implementation unnecessarily complex.

12. Scope and Priorities

Version 1 — Essential Launch Scope

- Four primary pages.
- Responsive navigation and footer.
- Homepage storytelling and scroll animations.
- Club introduction and visual highlights.
- Events preview and complete Events page.
- GD preview and GD Archive.
- Team hierarchy.
- Categorized Gallery and image lightbox.
- Conditional recruitment CTA.
- Verified club content and working links.
- Basic accessibility, SEO and performance optimization.

Future Enhancements

- Advanced event search and filtering.
- Search across the GD archive.
- More advanced gallery filtering and sorting.
- Dedicated detail pages for every event or GD entry, if not included initially.

- Content management dashboard.
- Automated recruitment scheduling.
- Analytics dashboard for page visits and CTA engagement.
- Member login or personalized features.

A complex login system, custom ticketing platform or AI chatbot is not required for Version 1.

13. Content Management and Ownership

The website must have a practical process for keeping content current.

Content Categories

- Club identity and overview.
- Event records and GD entries.
- Gallery images and captions.
- Team profiles and hierarchy.
- Recruitment status and official application link.
- Footer and social information.

Governance Requirements

- Assign an owner or editor to each content category.
- Verify dates, registration details, team roles and achievement claims.
- Review GD summaries before publication.
- Obtain required approvals for images and member information.
- Check external links before launch.
- Remove expired recruitment links and update completed events.

Structured content files and a documented update process may be sufficient initially. Introduce a CMS when frequent updates or nontechnical editors make it worthwhile.

14. Success Metrics

Establish a baseline after launch and review performance periodically.

- Visits to the homepage and each primary page.
- Clicks on Events and event registration links.
- Visits to the GD Archive.
- Gallery engagement and image interactions.
- Recruitment CTA clicks and completed applications, where measurable.
- Returning visitors.
- Mobile usability and page-loading performance.
- Broken-link and content-update issues.

Do not set arbitrary numerical targets before establishing a baseline.

15. Implementation Plan

Phase	Key tasks	Deliverable
1. Discovery and Design	Confirm branding, hierarchy and recruitment process; collect approved content; finalize architecture and wireframes; define motion behavior.	Approved layouts and design system
2. Core Development	Build shared navigation and footer; implement four pages, reusable components, CTA logic, animations and image interactions.	Functional website structure
3. Content Integration	Add club information, event records, reviewed GD summaries, gallery images, team details and official links.	Content-complete website
4. Testing and QA	Test navigation, registration links, CTA status, gallery, responsive layouts, accessibility, performance and metadata.	Tested release candidate
5. Deployment and Handover	Deploy, verify production URL, test mobile, document content updates and assign owners.	Production website and maintenance documentation

16. Definition of Done

- All four primary pages are accessible and functional.
- The homepage communicates the club's identity and activities clearly.
- Scroll animations enhance the experience without blocking usability.
- Events display accurate details and working registration links.
- GD entries contain reviewed summaries and documented outcomes.
- The team hierarchy reflects approved club information.
- Gallery images are categorized and can be viewed individually.
- Join the Club appears only when recruitment is open.
- Navigation, footer and social links work correctly.
- The website works on mobile, tablet and desktop.
- Accessibility, performance and essential SEO checks are complete.
- No placeholder content, fabricated metrics or broken links remain.
- The deployed website has been tested and a content-update process is documented.

FINAL PRODUCT DIRECTION

The homepage creates the experience; the dedicated pages provide the depth. Home introduces the club through visual storytelling, selected events, GD highlights and its organizational hierarchy. Events, GD Archive and Gallery provide clear paths to explore specific information. The result should be visually distinctive, technically reliable and straightforward for future club teams to maintain.
